Morpheus Node Manager

DECENTRALIZED AI INFRASTRUCTURE

● LIVE ON ARBITRUM MAINNET

OPEN SOURCE

Terraform for decentralized AI nodes.

Provision, monitor, and earn from AI inference on the Morpheus network.

THE PROBLEM

Running AI inference nodes is operationally brutal and doesn't scale.

- Manual health monitoring with no auto-recovery when nodes crash
- MOR earnings sit unclaimed in smart contracts, losing yield
- Bid management requires direct blockchain interaction
- No standard interface for AI agents to manage infrastructure
- Raw proxy-router API exposure creates security risk

THE SOLUTION

Autonomous node ops with safety-first automation and universal agent compatibility.

- ✓ **8 composable tools** covering full provider lifecycle
- ✓ **3 interfaces**: CLI, MCP server (Claude/Cline), OpenAI function-calling
- ✓ **Self-healing ops agent** with circuit breakers, auto-claim, webhooks
- ✓ **Endpoint allowlist** blocks fund transfers and wallet operations
- ✓ **One npm install**, zero config to start earning

Agent-Native

MCP server for Claude Code, Cline, Continue.dev. OpenAI tools schema for any LLM agent.

Self-Healing Ops

5-min monitoring loop. Auto-restarts nodes, claims earnings, alerts on low balances via Slack or Telegram.

Security-First

Endpoint allowlist blocks dangerous ops. SSRF guard, atomic locks, HTTPS enforcement, confirmation tokens.

Revenue Engine

Auto-claim MOR from sessions. Dynamic bid adjustment. Dry-run mode for risk-free earnings inspection.

ARCHITECTURE

AI AGENTS (Claude, GPT, Cline) → NODE MANAGER (CLI / MCP / OpenAI) → PROXY-ROUTER (Provider node) → INFERENCE (Venice, Akash, Ollama) ↔ ARBITRUM (MOR staking & payments)

8	3	8+	21	24/7
PROVIDER TOOLS	INTERFACES	BACKENDS	SECURITY TESTS	AUTONOMOUS OPS

WORKS WITH: Claude Code · Cline · Continue.dev · OpenCode · Any OpenAI Agent · Docker / systemd

WHY NOW

The convergence of AI agents and Web3 creates a new category: **autonomous AI-managed revenue infrastructure**. As agents gain tool-use capabilities, they need standardized interfaces to manage on-chain operations. Morpheus Node Manager is the first tool purpose-built for AI agents to operate decentralized

BUSINESS MODEL

Provider revenue share — MOR token earnings flow through managed nodes

Managed node services — ops agent enables turnkey "run a node" offerings

inference nodes — turning every AI coding assistant into a node operator.

Protocol integrations — guides for 10+ platforms (LibreChat, Flowise, Zapier, GenLayer)

Open source adoption — npm + Docker drives ecosystem growth
